MySQL to Excel is a free Microsoft Excel 2013 add-in that allows the migration of MySQL databases into Excel spreadsheets. It is a simple program that enables users to select the MySQL database, upload a profile, add the Excel file, choose a conversion mode, and schedule conversion updates. By choosing the MySQL database converter, users can select the schema of the MySQL table, input the user name and password, and select the kind of MySQL table that will be exported. The process to migrate the data from MySQL to Excel is simple and straightforward. MySQL to Excel does the necessary conversion without user input. The program automatically converts the MySQL table into a file that can be opened in Excel. The exported file has the required Excel worksheets. It is compatible with the various Excel versions. One can obtain all the information about the MySQL to Excel tool on the official MySQL website. It supports all Windows versions and versions of MySQL. The only real downside of this product is that it is provided free of charge and does not include customer support. One could argue the fact that MySQL to Excel is free of charge doesn't mean it is defective. Although not all users can use MySQL's (or any other software) commands, the common user does not need a command line application for such. However, if this is you, then MySQL to Excel is certainly not for you. Not all programs are available as freebies. If you run into problems with the application, the only recourse you have is to contact the developer or manufacturer to get it fixed. How to create an Excel Table from MySQL table data.
