What's new in this version: - EZ Keys and its features have been improved. - System requirements: PC running Windows 7, Vista, XP, 2000 or NT. - Instructional Video: [Trackback URL for this post](#): Andrew:Hey, I was wondering how these two programs compare. Currently I'm using Ableton Live and Sequential Circuits 'Random Access Delay', which is pretty nice. Also, if you could expand on the options, that would be cool. Andrew:Dabblet is a great tool for comparing the features of different softwares. In this case I made a direct comparison between Sequential Circuits 'Random Access Delay' (SED) and Ladabas' 'Audio Paint' (AP) In both cases I have the effect playing a sine wave with different frequencies. In the case of SED the 'range' is from 400 Hz to 1000 Hz. At first, I was curious about the 'depth' of the program, since I have a hard time accepting that these effects are 'simply' sine waves. However, as you can see, with AP it's not that simple and there are more 'options' and possibilities to make something more interesting. And finally, the best part of this comparison is the graphical representation of the audio where the red line represents a sine wave played with SED and the blue one
