This would be a site that has all of the, i think. Imaging systems including nuclear imaging, Xray diffraction, X-ray fluorescence, and X-ray computed tomography. And any other systems that might be interesting to me. But if there is anything else i have completely forgotten about please tell me. A: There is no fool proof way to find the "right" sites for the "right" subject. Such a list would have to depend on lots of subjective criteria and include analysis of the site's content, frequency of updates, reputation and so on. Even specific words or variations in the URL would have to be taken into account. If you really want to try the "guessing game" type approach, have a quick scan of the Related tags, pages that link to the same topic, and maybe the tags from some of the recent questions with interesting answers. Then have a look at the top 5 highest rated questions and see which ones seem to gather up the most sites. But the "best" list is by no means a definitive one that would need to be applied to any arbitrary new StackExchange site. FILED NOT FOR PUBLICATION JAN 21 2010 MOLLY C. DWYER, CLERK UNITED STATES COURT OF APPEALS
